

PORTABLE BERM

Fuel Spill Containment

AXI Portable Berms are used in conjunction with our mobile fuel polishing systems to protect the environment from fuel spillage during the fuel polishing process. Containment berms are commonly used for clean-up operations and spill containment situations. The berms are easily placed under valves and fittings, trucks, drums and machinery. It's compact design and light weight, chemical-resistant construction allows for maximum portability on any job.

*Collapsible Berm Folded and Unfolded

COLLAPSIBLE BERM

Weight	5 lbs (2.3 kg)
Dimensions	48" x 48" x 6" (H x W x D) (122 x 122 x 15 cm)
Tongue Tear	125 lbs (56.6 kg)
Grab Tensile	475 lbs (215 kg)
Dielectric Strength	77.3 KV
Weather Resistance	10,000 Hours
Certifications	ASTM

PORTABLE BERM FEATURES:

- Collapsible
- Lightweight & Durable
- Chemical Resistant Fabric
- ASTM Certified
- Drain Fitting
- Chemical Resistant
- Fuel Resistant
- Oil Resistant
- Acid Resistant

The size of the berm ensures all AXI MTC systems fit nicely inside of it. The berm is 6" high and the MTC can be rolled over the sides. The material is resistant to most hydrocarbons, and the mini-berm can be rolled up for easy storage. This is an excellent accessory that any user of AXI's MTC systems should keep on hand during the fuel polishing process.
